

ZXJ-L

Description:

1. ZXJ-L series vertical automatic encasing machine can automate the process to put the lined-up inner packing container into carton in plumb direction. We also design a suited line-up conveyor according to specifications and lining requirements of the package to match with encasing machine.
2. ZXJ-S series horizontal automatic encasing machine can put the lined-up inner packing container into accumbent carton automatically in horizontal direction. We can design a suited line-up conveyor according to specifications and lining requirements of the package to match with this encasing machine.

Application:

1. ZXJ-L series vertical automatic encasing machine is suitable for dispersed package or grouped package, or products packed in either round or un-round container.
2. ZXJ-S series horizontal automatic encasing machine is suitable for cases in symmetrical shape, such as round shape, square shape etc.
